Education

Bhagwan Parshuram Institute of Technology, GGSIPU

Dec 2022 - Present

Bachelor of Technology in Artificial Intelligence & Data Science (CGPA: 8.89; 89%, prev. sem: 9.8)

Delhi, New Delhi

- **Relevant Coursework:** Artificial Intelligence, Machine Learning, Numerical Computations, Prob & Stats, Operating Systems, Computer Networks, Digital Image Processing, OOPS, Data Structures & Algorithm, Data Mining.

Projects

Course - AI Powered Search Platform | *Next.js, React, TypeScript, Tailwind CSS, Supabase, AI SDK, Exa AI, Tavily AI* | *dec 2025*

- Developed an end to end **production-ready AI chat application** with support for **multiple AI models** (OpenAI, Anthropic, Google, Groq, XAI).
- **Frontend** - Designed responsive, accessible UI with utility-first design using **Tailwind CSS and shadcn**.
- **Backend** - Built secure authentication system using Supabase with OAuth providers (GitHub, Google, Twitter) & Supabase backend for user management and data persistence with **Row Level Security (RLS)**.
- Integrated dual **Web Search Agents**, Exa AI for general web search & Tavily AI for specialized arXiv paper extraction.
- **Link** : <https://www.qurse.site/>

LLM Chatbot Pdf Reader | *Python, LangChain, Streamlit, Hugging Face* | *june 2024*

- Implemented a real-time chat interface where user can interact with any uploaded pdf.
- Deployed Faiss cpu framework for **8.5x** faster processing speed for similarity search.
- Used LangChain for **20x** faster embedding by performing parallel indexing.
- **Link** : <https://www.linkedin.com/feed/update/urn:li:activity:7154797961342795776/>

Stock Price Prediction using LSTM | *Python, Keras, yfinance, Project Jupyter, Google Collab* | *june 2024*

- Trained a neural network model with RMSE of **7.4334**, using Recurrent Neural Network method called LSTM.
- Providing user with data driven and informed prediction of the stock share price, trained for Indian Market.
- **Collab Link** : https://colab.research.google.com/drive/1TqQM_C0Pw7hNYnBKfSbAd8z6Z-S9UB3C?usp=sharing

Interactive Uber data dashboard | *Google Cloud Console, Mage, Project Jupyter, Python* | *dec 2023*

- Developed a data visualization dashboard using GCP providing users with insights about Uber cabs.
- Built an ETL pipeline using Mage, reducing deployment time by **20%** and ensuring consistency and reliability.
- **Link** : <https://lookerstudio.google.com/reporting/0680b350-5367-4a50-84e6-5f1319a0a1ed>

Technical Skills

Languages: Python, Java, TypeScript, JavaScript.

Technologies: Next.js, PostgreSQL, Langchain, Cursor, MCP, Tailwind, Vercel, AI SDK, Sentry, Redis, Upstash, Claude Code, ShadCN, Supabase,

Concepts: Agentic AI, LLM's, GenAI, Machine Learning, Agentic workflow, Infra architecture, Neural Networks, AI Cloud Services, LSTM.

Achievements

- Secured a position in the top **10** out of 500 participating teams at the Vihaan Hackathon, organized by IEEE DTU.
- Drafting research paper for preprint "Local AI Chat Interfaces: A Data Local Architecture for Personal AI Assistance."
- Achieved **4th** place in the CodeClash Business Ideathon, hosted by MSIT.
- Conceptualized, built, and designed Navonmesh, the annual technical magazine for the CSE Department.

Freelance & Creative Engagements

Head of Design & Content, IEEE BPIT Tech Society : Led visual branding and content for the society; curated the social pages, designed graphics for events, and handled creatives for the annual tech fest.

Freelance: Collaborated with a tech startup to build, plan, conceptualize and implement MVP for them in AI field, gained experience in producing production ready code.

Creative Presence : Experience in creative designing across various domains. Reached **1M+** impressions by engaging in creative & technical online communities.
